Rebecca and Faruque,

My comments on the bee sections of the pyraclostrobin assessment are attached. I also made comments on other sections that provide info that is needed for the bee assessment (e.g., use summary). I would like to review this assessment again, after my comments have been incorporated. I also think that it would be helpful and efficient if Cassie and I meet and discuss some aspects of the assessment (e.g., residue studies).

Kris

FYI: I'm still working on the review. I have 10 pages to go.

I started but I didn't get to finish my review of the bee section today. I'll work on it first thing Monday morning and send it to you both ASAP

Hi Rebecca,  
I am okay with your comments. I added an additional comments. I have few additional comments to add in the DRA document. Once Kris send us her review, I will incorporate them and send you back the document. Thanks. Faruque

Hi Cassie and Harry,

Faruque, Kris and I have completed your review.

Here are a few things to consider when making the revisions.

1. Please be transparent and consistent. Make sure concisely convey what your model inputs are and why you selected them, what they are representative of and any assumptions.
2. When presenting results I have made some suggestions on organization in the text. I suggest you first go through acute (then characterize), chronic (then characterize) for each taxa. Build up the supporting evidence you have to characterize LOC exceedances.
3. Please read for clarity and grammar.
- 4.
